If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: Gas-generating material for gas-actuated car safety devices
 Inventors (please provide full names): Per Sjoberg

Earliest Priority Filing Date: 12-30-98

For Sequence Searches Only Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.

Please search claims 1-8, 11 and 14-28, as attached hereto. Please note that the invention in its broadest sense is simply a composition comprising guanidine dinitramide and guanyl urea dinitramide (claim 4).

SN 09/869650

NOV. 9. 2004 12:56PM

NO. 0147 P. 7

Application No.: 09/869,650

Docket No.: 20459-00346-US

AMENDMENTS TO THE CLAIMS

1. (Previously Presented) Process for the preparation of car safety devices comprising providing a gas-actuated car safety device, and placing a pyrotechnical material comprising guanidine dinitramide and guanyl urea dinitramide as a gas-releasing composition in the car safety device.

2. (Previously Presented) Process according to Claim 1, wherein the guanyl urea dinitramide is present in an amount to adjust the rate of burn of the gas-releasing composition.

3. (Withdrawn) Process according to Claim 1 for recovering the said chemicals, guanidine dinitramide and guanyl urea dinitramide, wherein this is done by low-temperature crystallization from water at various temperatures.

4. (Withdrawn) Pyrotechnical gas-generating composition comprising guanidine dinitramide and guanyl urea dinitramide.

5. (Withdrawn) Pyrotechnical gas-generating composition according to Claim 4, wherein the guanidine dinitramide is present as the primary component, and the rate of burning of the gas-generating composition is regulated by the presence of a suitable amount of guanyl urea dinitramide.

6. (Withdrawn) Pyrotechnical gas-generating composition according to Claim 4, wherein the guanidine dinitramide comprises greater than 50% by weight of the gas-generating composition.

7. (Withdrawn) Pyrotechnical gas-generating composition according to Claim 4, wherein the gas-generating composition is in the form of pressed tablets containing a binder, the binder does not exceed 10 wt-%.

Application No.: 09/869,650

Docket No.: 20459-00346-US

8. (Withdrawn) Process according to Claim 2 for recovering the said chemicals, guanidine dinitramide and guanyl urea dinitramide, wherein this is done by low-temperature crystallization from water at various temperatures.

9.-10 (Canceled)

11. (Withdrawn) Pyrotechnical gas-generating composition according to Claim 5, wherein the guanidine dinitramide comprises greater than 50% by weight of the gas-generating composition.

12.-13 (Canceled)

14. (Previously Presented) The process according to claim 1, wherein the gas-releasing composition is in tablet form.

15. (Previously Presented) The process according to claim 1, wherein the gas-releasing composition is obtained from a previous car safety device, and is recrystallized to provide the gas-releasing composition.

16. (Previously Presented) The process according to claim 1, wherein the pyrotechnical material further comprises a binder, and the guanidine dinitramide comprises 20% to 80% by weight of the gas-releasing composition, not including the binder.

17. (Previously Presented) The process according to claim 1, wherein the pyrotechnical material further comprises a binder, and the guanidine dinitramide comprises 40% to 80% by weight of the gas-releasing composition, not including the binder.

18. (Previously Presented) The process according to claim 1, wherein the pyrotechnical material further comprises a binder, and the guanidine dinitramide comprises 40% to 60% by weight of the gas-releasing composition, not including the binder.

Application No.: 09/869,650

Docket No.: 20459-00346-US

19. (Withdrawn) The process according to claim 4, wherein the guanidine dinitramide comprises 20% to 80% by weight of the gas-releasing composition, not including binder.

20. (Withdrawn) The process according to claim 4, wherein the guanidine dinitramide comprises 40% to 80% by weight of the gas-releasing composition, not including binder.

21. (Withdrawn) The process according to claim 4, wherein the guanidine dinitramide comprises 40% to 60% by weight of the gas-releasing composition, not including binder.

22. (Currently Amended) The process according to claim 2, wherein the guanidine dinitramide is present as the primary component, and the ~~rate of burning of the gas-releasing composition is regulated by the~~ amount of guanyl urea dinitramide in the composition regulates the rate of burning of the composition.

23. (Previously Presented) The process according to claim 1, wherein the gas-releasing composition further comprises a binder, and the amount of binder does not exceed 10 wt%.

24. (Currently Amended) A process for the preparation of car safety devices comprising: providing a gas-actuated car safety device, and placing a pyrotechnical material comprising guanidine dinitramide and guanyl urea dinitramide as a gas-releasing composition in the car safety device, wherein the guanidine dinitramide is present as the primary component; and the ~~rate of burning of the gas-generating composition is regulated by the~~ amount of guanyl urea dinitramide in the composition regulates the rate of burning of the composition.

25. (Previously Presented) The process according to claim 24, wherein the pyrotechnical material further comprises a binder, and the guanidine dinitramide comprises 40% to 80% by weight of the gas-releasing composition, not including the binder.

26. (Previously Presented) The process according to claim 24, wherein the pyrotechnical material further comprises a binder, and the guanidine dinitramide comprises 40% to 60% by weight of the gas-releasing composition, not including the binder.

Application No.: 09/869,650

Docket No.: 20459-00346-US

27. (Currently Amended) The process according to claim 24, wherein the gas-releasing composition is obtained from a previous car safety device, and ~~is~~ was recrystallized to provide the gas-releasing composition.

28. (Previously Presented) The process according to claim 24, wherein the gas-generating composition is in the form of pressed tablets containing a binder, and the amount of binder does not exceed 10 wt%.

AB A method is provided for enhancing the soly. of an ionizable compd. in a lipophilic medium by admixing the compd. with an effective soly.-enhancing amt. of an N,N-dinitramide salt. The ionizable compd., upon ionization, gives rise to a biol. active cationic species that ionically assoc. with the N,N-dinitramide anion N(NO2)2 following admixt. with the N,N-dinitramide salt. The biol. active cationic species may be a pharmacol. active cation, in which case the method is useful for enhancing the penetration of the blood-brain barrier by the pharmacol. active cation. In other embodiments, the ionizable compds. are medical imaging or diagnostic agents, or agricultural agents such as pesticides. Salts of biol. active cations and N,N-dinitramide ion are also provided as novel

compns. of matter.

AB Hybrid gas-generating materials for gas-actuated safety devices (esp. vehicle occupant airbags) consists of 5-95 wt.% guanidyl urea dinitramide, 5-50 wt.% of an oxidant (based on total amt. of solids), and, if necessary, 0-90 wt.% guanidine dinitramide, <10

wt.% of finely divided boron, and <10 wt.% binder. Oxidizers are typically selected from (1) alkali metal nitrates, perchlorates, and permanganates, (2) manganese-group metal oxides (e.g., oxides of Fe, Ni, and Co), and (3) Groups 7-12 transition metal oxides. These compns. are characterized by low pollutant emissions, low smoke formation, and adjustable burning rate.

- ST safety device airbag gas generator; pyrotechnic vehicle airbag inflation; propellant vehicle airbag inflation; guanyl urea dinitramide airbag propellant; guanidine dinitramide airbag propellant

AB The invention relates to a method of producing org. dinitramide salts, for instance, guanidine dinitramide and guanylurea dinitramide starting from ammonium dinitramide (ADN). A concd. aq. soln. of ADN is reacted with a concd. aq. soln. of an org. salt, whose anion is OH- or CO32- which is capable of taking up a proton from the ammonium ion of ADN and transferring said ion to ammonia. The formed byproducts, i.e. ammonia and possibly carbonic acid, are driven off from the soln., as well as a certain amt. of water to maintain a concd. soln. The org. dinitramide salt is then pptd., for instance by cooling the soln. The method can be carried out as a continuous or semicontinuous process in a reactor, to which concd. aq. solns. of ADN and org. salt, resp., are supplied in equimol. amts. The soln. is transferred from the reactor to a pptn. tank where org. dinitramide salt is pptd. and a supernatant is recirculated to the reactor.
